Please search the following as soon as possible for application with serial number 09/762,767

- 1. SEQ ID NO:1 and 3, against all <u>commercial nucleic acid databases</u> including <u>issued patents database</u> and <u>pending application database</u> and provide a <u>print of all results</u>.
- 2. SEQ ID NO: 2 and 4, against all <u>commercial protein databases</u> including <u>issued patents database</u> and <u>pending application database</u> and provide a <u>print of all results</u>.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao, Ph.D. Biotechnology Patent Examiner Art Unit 1652, Room 10A11 Mail Box in 10D01 Crystal Mall 1, USPTO.

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                       Score

CNAP sequences may be used for prevention, treatment and diagnosis of diseases associated with altered CNAP expression such as, cell proliferative disorders (e.g. arteriosclerosis, cirrhosis, leukaemia, lymphoma and cancer of the breast, prostate, lung and brain), autoimmune/inflammatory disorders (e.g. asthma, anaemia, diabetes mellitus, multiple sclerosis and psoriasis), neurological disorders (e.g. epilepsy, alzhelmer's/Parkinson's disease and strokes), vision disorders (e.g. conjunctivitis, glaucoma, cataracts and retinitis pigmentosa), reproductive disorders (e.g. infertility, uterine fibroids, ectopic pregnancies and impotence) and smooth muscle disorders (e.g. angina, anaphylactic shock, Kearns-Sayre syndrome and hypertension). The coding sequence can be used for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    associated protein-3 (CNAP-3), identified in Incyte clone 159278 that is isolated from ADENINBO1 cDNA library.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel purified human soluble guanylate cyclase alphal/betal (hagCalphal/betal). The products of the invention have antiarteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct), peripheral arterial occlusive disease and arterial hypertension. Antibodies to hagCalphal/betal can be used for diagnosis of aberrant hagCalphal/betal expression in human tissues. This sequence represents the human soluble guanylylcyclase alphal subunit described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; guanylylcyclase alphal; hsGCalphal; hsGCbetal; soluble; guanylylcyclase betal; antiarteriosclerotic; vasotropic; hypotensive; gene therapy; arteriosclerosis; restenosis; ischemia; diagnosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a bhological sample from the patient with comprises contacting a bhological sample from the patient with comprises contacting a bhological sample from the patient with comprises contacting a bhological sample from the patient with contact them. The prostate cancer-associated polynucleotide sequences to them. The prostate cancer-associated polynucleotide sequences contact the prostate cancer and are derived from the tissues of various corganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating constate cancer in mammals. The prostate cancer associated genes are cuseful for diagnosing or treating prostate cancer, as well as for constate cancer. The nucleic acid sequences are particularly useful congene therapy, as a vaccine or in antisense applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                  The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in corganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer, as well as for identifying modulators of prostate cancer, as reparticularly useful in gene therapy, as a vaccine or in antisense applications.

C ABG61800-ABG61944 represent prostate cancer-associated proteins.

The inventuable of developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB07737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure;

                                                                                                                                                                                                                                                                                                                                This invention describes novel purified human soluble guanylate cyclase alphal/betal (hsCcalphal/betal). The products of the invention have antharteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct), peripheral arterial occlusive disease and arterial hypertension. Antibodies to hsGcalphal/betal can be used for diagnosis of aberrant hsGCalphal/betal expression in human tissues. This sequence represents the human soluble guanylylcyclase betal subunit described in the method of the human soluble guanylylcyclase betal subunit described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; guanylylcyclase alphal; hsGCalphal; hsGCbetal; soluble; guanylylcyclase betal; antiarteriosclerotic; vasotropic; hypoten gene therapy; arteriosclerosis; restenosis; ischemia; diagnosis;

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

invention relates to an isolated nucleic acid detection reagent

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG11), expressed DNA sequences (ABLIG176-ABLIG11), expressed DNA sequences (ABLIG175) and the encoded proteins

Hg-gc-1 polynucleotides and polypeptides are useful as active agents for controlling plant feeding nematodes. They can be used to screen for compounds that have the ability to disrupt parasitic nematode feeding or chemotaxis.
                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequences given in AAR38862-63 represent the guanylyl cyclases, GC-A and GC-B, which binds heat stable enterotoxin. These proteins are enterotoxin receptors which may be used as a therapeutic to control intestinal fluid permeation as well as abnormal conditions caused
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Guanylyl cyclase; GC-C; heat stable; mucosa; polyA+ RNA; PCR; enterotoxin binding domain; antibody; diarrhoea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GC-B.

AAR10399
    The sequence was derived from the DNA encoding natriuretic peptide receptor B, NPRB, having guanyl cyclase (GC) activity and protein kinase activity. The DNA can be inserted into expression vectors for the prodn. of the protein, opt. after being mutated to produce NPRB analogues. The protein has a mol wt. of 115 kD (calculated Mr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-APR-1991

The protein (or variants) can be used in treatment of natriuretic peptide disorders, and also to isolate peptides using affinity chromatography. Antibodies with affinity for NPRB can also be prepd. An analogue, NPRBDKC, comprising only AAs 1-433 of the mature protein, is also claimed, as well as variant described in AAR10867.

Editor's note: the AAs replaced in the sequence do not correspond to those of NPRB given in the specification (see p.27, 1.23-27; figs. 1 and 2), but instead to AAs in the sequence provided for NPRB (fig. 2). The origin of the AAs to be substituted is not clear; they may be taken from the sequence of rat NPRB (p.8, 1.18; p.9, 1.33) or rat NPRB (p.27, 1.20). The substitution indicated on p.9, 1.33, i.e. "Phe644" is thought to be an error and should read
                                                                                                                                                                                                                                                                                                                                                     The mutant was produced by modifying the DNA encoding the native sequence. The protein has guanyl cyclase (GC) activity protein kinase activity. The DNA can be inserted into express vectors for the prodn. of the NPRB analogue. The protein can used in treatment of natriuretic peptide disorders, and also tisolate peptides using affinity chromatography. Antibodies wi sefinity for NPRB can also be prepd.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           by bacterially released enterotoxin. The binding domain of the proteins, or antibodies to the proteins, can be used to eliminate diarrhoea. The proteins may be used to isolate ligands and to scr for antagonists of toxin binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYVA-)

A method for C haplotyping the NPRI gene in an individual comprises identifying the C nucleotide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the NPRI haplotypes given in the specification or whether both copies are defined by a haplotype C pairs can be assigned to specific genotyping, whereby all possible haplotype pairs can be assigned to specific genotypes. An association between a C trait and a haplotype or haplotype pair of the NPRI gene can be cidentified by comparing the frequency of the haplotype pair in a population exhibiting the trait with the frequency of the haplotype cor haplotype pair in a reference population, where a higher haplotype cor haplotype or haplotype pair. NPRI and its corresponding DNA are used the haplotype or haplotype pair. NPRI and its corresponding DNA are used corresponded to the expression and function of NPRI, for use in screening corresponded to the properties of the pair to treat diseases related to NPRI activity, such as higher thaplotype pair. This sequence are also useful for studying the effect of corresponded to the oblogical activity of NPRI as well as on the binding caffinity of candidate drugs targeting NPRI. This sequence represents the human NPRI no INPRI activity of NPRI as well as on the binding caffinity of candidate drugs targeting NPRI. This sequence represents the

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   submitted to the EMBL Data Library, November 1995
A; Description: The sequence of C. elegans cosmid T07D1.
A; Reference number: Z18584
A; Accession: T16822
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-1099 < CLEI>
A; Cross-references: EMBL:U41531; NID:g1109802; PID:g11098
C; Genetics:
A; Gene: CESP:T07D1.1
A; Introns: 26/3; 94/3; 144/2; 200/3; 239/2; 278/3; 344/1;
